

Web development proposal

A fictional business.

Website Project Proposal: Phodii's Flower Pod

1. Organisation Overview

- Name: Phodii's Flower Pod
- Brief History: Founded in 2020 by floral designer Phodii, the business began as a small weekend stall at a local farmers' market. Due to high demand for fresh, seasonal bouquets, it expanded into an online store in 2023.
- Mission: To deliver joy through sustainably grown, seasonal flowers that brighten every customer's day.
- Vision: To become the most trusted local flower shop for unique, rotating collections that celebrate each season.
- Target Audience: Young professionals (25–40), gift-givers, event planners, and flower enthusiasts who value freshness, design, and limited-time offers.

2. Website Goals and Objectives

- Goals:
 - Increase online sales by 30% in 6 months.
 - Showcase seasonal product rotations clearly.
 - Promote special sales (e.g., Valentine's, Mother's Day, "Summer Solstice Sale").
- KPIs:
 - Monthly website traffic.
 - Conversion rate (orders / visitors).
 - Seasonal collection click-through rate.

- Email sign-up rate for sale alerts.

3. Current Website Analysis (if applicable)

- Since you already built the site, this is a realistic analysis:
 - Strengths: Clean pink/white aesthetic, fast load time, clear product images.
 - Weaknesses: No dedicated “Seasonal Flowers” section; sale banners are easy to miss; mobile navigation can be improved.
 - Improvements: Add a dynamic seasonal carousel on homepage, create a “Sales & Events” page, improve mobile menu.

4. Proposed Website Features and Functionality

- Essential pages:
 - Homepage (with rotating sale banner)
 - Shop / All Flowers (filter by season, price, occasion)
 - Seasonal Collection (Spring, Summer, Autumn, Winter)
 - Special Sales (limited-time offers)
 - About Us
 - Contact
- Functionality:
 - E-commerce checkout (cart, secure payment)
 - Stock indicator for seasonal flowers
 - Email pop-up for 10% first order
 - Countdown timer on active sales

5. Design and User Experience

- Colour Scheme:

- Primary: Soft Pink and White
- Accent: Deep Green for call-to-action buttons
- Typography:
 - Headings: Playfair Display (serif, elegant)
 - Body: Poppins (sans-serif, clean)
- Layout & Design: Minimal, airy grid layout with large product photography.
- User Experience:
 - Sticky navigation with search bar.
 - Breadcrumbs for easy backtracking.
 - Mobile-responsive card layout.
- Low-fidelity wireframes (text description):
 - Homepage: Hero banner (current sale) → 3 seasonal featured flowers → "Shop by Season" buttons → Email sign-up → Footer.
 - Seasonal page: 4 season tabs
product grid with "Limited stock" badges.
 - Sales page: Countdown timer at top discounted products with original price crossed out.

6. Technical Requirements

- Hosting & Domain:
 - Domain: phodiisflowerpod.com (approx. \$12–15/year)
 - Hosting: Shared hosting (e.g., SiteGround or Bluehost) – \$10–15/month
- Languages & Frameworks:
 - HTML5, CSS3, JavaScript (Vanilla or React for dynamic seasonal components)
 - Backend: Node.js + Express OR a headless CMS (e.g., Strapi)
 - Database: MongoDB or MySQL (to manage seasonal inventory)
 - Payment integration: Stripe API

7. Timeline and Milestones

The project will follow a six-week development schedule aligned with the subject's submission dates.

Week 1 (Days 1–2): Proposal approval and requirement finalisation.

Week 1 (Days 3–5) through Week 2 (Days 1–3): Wireframing and design mockups, including low-fidelity layouts for homepage, seasonal collection page, and sales page.

Week 2 (Days 4–5) through Week 3 (Days 1–5): Homepage and seasonal logic development, enabling dynamic flower rotations for Spring, Summer, Autumn, and Winter.

Week 4 (Days 1–4): Sales page development with a functional countdown timer for limited-time offers (e.g., Valentine's Day, Mother's Day).

Week 4 (Days 5–7) through Week 5 (Days 1–3): E-commerce and checkout integration, including cart functionality and Stripe payment processing.

Week 5 (Days 4–6): Mobile responsiveness testing across iOS and Android devices.

Week 5 (Day 7) through Week 6 (Days 1–3): Final quality assurance, content population with seasonal product descriptions and imagery.

Week 6 (Day 4): Official website launch

8. Budget

The budget reflects realistic research-based estimates for a small seasonal flower e-commerce business.

One-time setup costs:

- Domain name (phodiisflowerpod.com) for one year: \$15 (based on Namecheap or Google Domains pricing).
- Hosting for one year (shared hosting, e.g., SiteGround or Bluehost): \$120.
- SSL certificate: \$0 (included free with most hosting providers).

- Premium theme or custom CSS styling: \$50 (e.g., a lightweight WooCommerce-compatible theme).
- Initial stock photography for seasonal flowers (if not using own images): \$30 from royalty-free sources.

Monthly recurring costs:

- Hosting renewal (after first year): \$10–15 per month.
- Payment processing fees (Stripe or PayPal): Approximately 2.9% + \$0.30 per transaction. Based on an estimated 50 monthly sales at \$40 average order value, this totals roughly \$70 per month.
- Website maintenance (3 hours per month at \$30 per hour for plugin updates, security patches, and content updates): \$90 per month.
- Email marketing service (e.g., Mailchimp or Klaviyo for up to 500 subscribers): \$15–20 per month.
- Domain renewal annually: \$15 per year (equivalent to \$1.25 per month).

Total estimated first-year cost: Approximately \$185 one-time setup + \$1,140 recurring expenses = \$1,325 for the first year, averaging \$110 per month.
